English Heritage

OVERVIEW

Pellings approach to conservation projects is based on the belief that necessary repairs should be carried out in order to preserve and maintain, without damaging the building, or its original fabric.

An understanding of the historical development of a building is therefore essential, as is the ability to carefully analyse and monitor existing defects before deciding on a course of action.

Pellings have a commitment towards sensitive conservation and are able to draw on their considerable experience of working on major conservation projects. Our heritage team includes conservation accredited Building Surveyors and Architects.

This experience covers a diverse range of project including, conversion of a Grade II Listed redundant Church into a new London Concert Venue and home of the Royal Philharmonic Orchestra, repairs to Victoria and Albert museum and various residential front refurbishments including Almshouses and a Listed retirement village in Surrey.
